

zed E-Commerce and WebCRM 7.4

Release Notes

Introducing version 7.4

Highlights:

- 40 Bugfixes, 67 Changes or Updates
- Complete overhaul of Administration interface matches other zedsuite products
 - Page titles added, asterisk indicates non-synching
 - Added link to online help
 - Updated Icons
 - Ordered menu items alphabetically where necessary
- Major SEO functionality added
 - XML sitemap generator added tested with Google© Webmaster Central, Bing © Web Master and Yahoo! © Site Submit
 - URL Rewrite built-in for categories, items, static pages providing more search engine friendly URL's
 - Separate meta description for items, page title generation now "Item Name | Item Code"
 - Default robots.txt
 - Viewstate compression
 - Search engine crawler user-agent detection to display hyperlinks for pages on partlist and still use Javascript postback for non-crawlers
- Synch summary screen in Admin and synch errors sent via e-mail
- SAP Business One 8.8.1 PL5 compatibility

What's new in 7.4

Area	Details
Activity	BUG: No longer limit activity display to 1 year prior to the current day on prospects and business partners
Address	Hide "State" text when state dropdown is hidden on address block
Admin Menu	Sort the setup menu alphabetically
	Sort the layout menu alphabetically
	Sort the definitions menu alphabetically
	Sort the marketing menu alphabetically
	Synch data map menu link opens synch data map within site instead of in pop-up window
	Add sitemap creator link within marketing menu
	Added link for Logs in admin home page
Business Partner	Created new UDF on BP Master for the purposes of indicating whether a business partner should be active on the website. No longer synchronizing with Active/Inactive functionality of B1 Default setting of blank is considered active. Upgrade step added so inactive BP's will be set as inactive on web.
	Tax exemption on business partner detail in Admin > Financials > Taxes no longer a date range, only on/off per tax definition
Cart	BUG: Fixed issue where double-clicking delete icon on cart.aspx can cause error
	BUG: Fixed pagination bug with saved lists
Category	Added page title, meta description, and meta keyword fields
	BUG: Generate hyperlinks instead of Javascript postbacks when search engine crawler user-agent is detected
	Partlist.aspx now generates Friendly URL's
Contact Lists	BUG: Fixed issue where customer subscribing to newsletter did not display
Installer	Added confirm password field for reset user screen
	BUG: Upgrading instance merges new web.config information rather than overwrite or ignore

What's new in 7.4

Area	Details
Inventory	BUG: Stock level of Sales Kit components now determine entire Sales Kit availability, if availability controlled by stock status
	No longer adding updates to PartInventory object to TransactionQueue on web
Item	BUG: Fixed issue where product line did not support paging
	BUG: Fixed issue where "#" symbol in item code would not display in browser
	BUG: Fixed issue where entering HTML in description field would not save or be displayed
	Now synchronizing the packaging unit of measure term from B1(Box, crate, pack), no longer necessary to add term to Setup > Units > Packaging
	Now displaying volume discount information on item search result page
	BUG: Fixed issue with displaying Packaging Unit of Measure and Qty per Packaging UoM, and now instead displaying Sales Unit of Measure and Items per sales unit
	Added meta description field for items separate from item description
	Page title now displays "Item Name Item Code"
	Sorting results by Item Code by default on item search page in the admin
Mail template	BUG: Forgot password email template now detecting correct server id
	Updated invoice mail template
Manufacturer	Removed encoding association from manufacturer detail
Messaging	BUG: Shipment emails ignore server id and use default template only
	BUG: Fixed issue where value for POP3 or SMTP port was required even when not using remote server
	Added ability to receive summary of synch errors via email
Opportunity	Now possible to sort opportunities by status on search page in Admin > Sales > Opportunities
Order	BUG: Validation of required fields for credit card now checking all fields at once
	BUG: Removed links from address display on onepagecheckout

What's new in 7.4

Area	Details
Order	Removed link from backorder icon
	BUG: Fixed issue where payment method charge may not display on onepagecheckout
	Added day and evening phone numbers to onepagecheckout
	Updated My Account > Order History page to include a date range control. Now only displays the last 30 days on page load
	BUG: Fixed error with viewing printable order when viewstate compression was enabled
Payment Gateway	Fixed issue where it was not possible to charge a credit card during checkout using a credit card gateway
Pricelist	BUG: Fixed issue where if a pricelist code happened to match a BP code, the pricelist would apply to that BP
	Removed ability to set default retail pricelist in the admin as it may conflict with setting in Synch Manager
Prospect	Updated "Add Prospect" page layout
Quote	Made the BP code link clickable in the Admin > Sales > Quotes search page
Service Call	Set default start date on new service call to current date
	BUG: Fixed error when adding activity to service call, created by new Admin look and feel master page update
Service Contract	BUG: Fixed error when searching for existing contract by Contract Type
Shipping	Hiding the details folder when adding or editing a zone group name
	BUG: Fixed issue with attempting to look up real time rate when total order weight is zero
	BUG: Fixed issue where saving a rate definition of real-time seems to override other definitions (matrix)
	Added default values for 'FedEx Multi Box Threshold Weight', 'FedEx Average Box Weight', 'UPS Multi Box Threshold Weight' and 'UPS Average Box Weight' fields.
Static Pages	Added ability to embed theme plug-ins within a static page
	Added Friendly URL functionality

What's new in 7.4

Area	Details
SynchManager	BUG: Fixed issue where SBO to Web document synch didn't set tax on OrderExpense record, thereby incorrectly displaying tax on the Order History page
	BUG: Fixed upgrade issue when upgrading to 7.4 from 7.2 or earlier
	BUG: Fixed issue where having a space in the synch profile name prevented synch from running
	Greatly improved BP synch performance
	Created a new page in the Admin to view Synch Status Summary (Admin > Logs > Synch Summary Log)
	Now clearing out PartsMasterUDF during initial synch
	Now setting unsupported delete queue records to "synched" so they are removed from the queue
	Default setting added for Orders synched from E-Commerce is "Unapproved"
Theme	Moved product thumbnail, preview size, login required, checkout notes, and AccountID prefix to tab on theme detail
	Updated Page Redirect plug-in to use server.transfer(HTTP 301) instead of response.redirect(HTTP 302)
	BUG: Removed stylesheet reference from newbasic theme as it was already being added by NPBasePage
	Removed the no-cache meta data tag from the standard common.Master
	Updated category block plug-in to use FriendlyURL for links
Users	Implemented site wide inactivity session timeout for users
	BUG: Fixed issue where if userid contained "&" the user cannot open the userinfo.aspx page
	Added bulk operation for assigning users to themes
	Removed delete user bulk operation
	Removed Web Password UDF from B1, all users now administered via Reset User tool
Removed approved checkbox from Reset User tool and User Details	

Known Limitations

- Warehouses assigned to the real time rate within a shipping option definition must contain a postal code at a minimum.
- Warehouse information can only be updated in Business One
- All items must have a weight to use real time rate quotes
- All versions and patch levels of SAP Business One 2005A are no longer supported in version 7.1.0 and higher
- Due to a limitation in SAP Business One, copying special prices from one Business Partner to another does not get queued for synch and therefore is not synchronized.
- SAP Business One 2007A SP0 PL49 and below is not supported and was not tested with zed E-Commerce 7.4

Compatibility

Solution Component	Compatible	Notes
SAP Business One 8.8.1 PL5	Yes	
SAP Business One 8.8 PL21	Yes	
SAP Business One 2007A SP1 PL15	Yes	
Windows Server 2003 SP2 32-bit with IIS 6	Yes	64-bit was not tested, however no 64-bit related issues found with Server 2008 64-bit
Windows Server 2008 R2 64-bit with IIS 7.5	Yes	
Windows 7 (any edition) 32 or 64-bit with IIS 7	Yes	
Windows Vista 32-bit or 64-bit with IIS 7	Not tested	This was not tested, however, as Server 2008 uses IIS 7, there should not be any issues
Windows XP SP3 32-bit or 64-bit with IIS 5.1	Not tested	
SQL 2005 32-bit*	Yes	64-bit was not tested, however no 64-bit related issues found with Server 2008 64-bit
SQL 2008 R2 64-bit*	Yes	
Google Chrome 10	Yes	
Firefox 4 and 5	Yes	
Internet Explorer 8 and 9	Yes	Version 8 may have minor display issues in the Admin
Apple Safari 5	Yes	

*SQL Express edition was not tested and is supported in non-production environments only

API Delta 7.3 to 7.4
